

# N+1 redundancy

N+1 redundancy is what 1010 Technology Center utilizes as a safeguard to insure maximum up-time. Our APC Symmetra and APC In-Row Cooling units are configured with N+1 and as we expand the number of racks in the power and cooling will also be expanded to maintain N+1.

# 24/7 support

1010 Technology Center provides our customers 24/7/365 access to their equipment so they can rest easy knowing their systems are not only secure, but also available anytime they need to visit our facility.

## about us

1010 Technology Center, Inc. is a privately owned data center located in beautiful Alpena, Michigan and is one of the only state-of-the-art data centers available in Northern Michigan. Years went into the planning and development of the business with an emphasis on finding the right geographic location with the ability to provide up to a Tier 4 data center.

In 2012, the perfect location was found at 1010 US 23 N in Alpena. So pleased with the site we quickly named the company after the address where the data center now exists. We've upgraded the existing building and utilities to provide secure, reliable data center services. Originally constructed as a bank, our concrete masonry building is ideally suited as a data center and with a full acre of land we have abundant room for expansion to meet our customer's future needs.

1010 Technology Center is available to support the technology needs of Financial Institutions, Schools, Municipalities, private businesses and more throughout the Great Lakes Region and beyond. Our goal is to allow our customers to focus on what they do best and let us do the rest.
